

ISCTM Behavioral and Psychiatric Symptoms in Dementia: Apathy Working Group Summary
19th Annual Meeting
15 February 2023

In brief, our WG session highlighted the outcome of our Delphi panel process that aimed to evaluate common apathy measures and their overall and item fidelity to and strength of association with the Diagnostic Criteria for Apathy (DCA) in Neurodegenerative Disease that we previously developed. We also discussed a potential brief screen and possibly an endpoint measure comprised of items that we found most strongly correlated with the DCA and covered all relevant domains. Next steps include “road testing” that derived measure.
