

Workgroup on International Clinical Trials

The workgroup reviewed a summary of our first product which is the guidance on ClinRo translation and adaptation for international clinical trials.

This will be presented at the joint ISCTM/ECNP meeting next year.

Members then discussed possible new topics and next deliverable product. The members enthusiastically stated the commitment to continue the workgroup.

It was agreed that the next area of focus will be decided by a process of a survey prior to the February annual meeting and a final decision at the February workgroup meeting.
