

Artificial Intelligence and Machine Learning for CNS Clinical Trials Working Group
22 October 2020

In this meeting of the working group, we discussed next steps for the five subgroups who met in Feb 2020:

- Biomarkers
- Enrichment
- Optimization
- Outcome
- Placebo

The Placebo subgroup is actively developing a manuscript under the leadership of Erica Smith and Larry Alphs. Leaders were identified on the call for the Biomarkers and Outcomes groups and manuscript development work will soon begin within those subgroups.
