

# Biomarkers Workshop

---

Don Goff and Steven Potkin presented the draft of the “Imaging and Non Imaging Biomarkers in Schizophrenia “manuscript with reference to previous biomarker ISCTM survey - a robust discussion occurred.

Planned modifications to **manuscript** by working group: schizotypal subjects, validating and qualification of biomarkers, RDoCs implications, C-PATH analysis applications, priority of use biomarkers to enriching RCTs.

Discussion points: **Realization that biomarkers are rarely compared in same study making comparative evaluation difficult**

- Potential use ADNI as model for designing a “Schizophrenia ANDI”:
  - Coordination with European colleagues possibly at ECNP
  - Access to other existing biomarker datasets
- Interaction with other Common Data Element efforts : FDA, C-AMD, NDCT, and CDIS
