

## **Summary of the Feb 19 ISCTM Estimands Working Group Meeting**

As planned, the Feb 19 Estimands and Missing Data Working Group Session hosted informal conversations on estimands and their implementation in clinical trials. The attendees tackled various topics, including implementation in trial protocols, role of the population attribute and its possible impact to labeling, types of intercurrent events, use of detailed trial objectives and available statistical methodology. This working group will restart its monthly meetings after the 16th Annual Scientific Meeting and work towards a manuscript on this topic.
